

Clockify time tracking in Claude

Plugin install guide

Prepared for Numaco AG team

May 2026

Introduction

This guide walks any Numaco colleague through installing the clockify-mcp plugin in Claude (the desktop app or Claude Code in the terminal), authorising Clockify, and loading the Numaco-specific billing rules. The plugin then nudges you to log time, accepts ad-hoc "log this session" requests, and reconciles your Outlook calendar against Clockify on a schedule. Each colleague authenticates with their own Clockify API key; the shared server never stores it.

Step 1 — Get your Clockify API key

Open clockify.me, click your profile icon, then Preferences → Advanced → API. Click Generate and copy the key. Keep it handy for Step 3.

Step 2 — Install the plugin

Mac desktop app users

In the Customize panel (sidebar), click the + next to Personal plugins → Create plugin → Add marketplace. Paste NumacoAG/clockify-mcp, click Add. Open the new marketplace in the sidebar, then click Install on the clockify-mcp card.

Terminal users (Claude Code)

Type these two slash commands in a Claude Code session:

- `/plugin marketplace add NumacoAG/clockify-mcp`
- `/plugin install clockify-mcp@clockify-marketplace`

After installing, fully restart Claude (Cmd+Q the desktop app and reopen, or exit the terminal session and start a new one). The MCP server only wires in on a fresh session.

Step 3 — Authorise Clockify

Paste this prompt into Claude

What are my Clockify projects?

Claude opens an authorisation URL in your browser. Paste your Clockify API key in the Connect Clockify form and click Authorize. Your key is encrypted inside your own access token; the shared server never stores it. You're in.

Step 4 — Install the Numaco billing rules (one-time)

Paste the prompt below into Claude. It will show you the resulting file and wait for your explicit confirmation before writing.

Paste this prompt into Claude

Numaco AG
Haldenstrasse 3c
CH-8905 Islisberg
Swiss Vat No:
CHE-107.980.861 MWST
Tel.: +41 (0) 76 805 67 79
www.numaco.ch

Append the following block to my ~/.claude/CLAUDE.md (create the file if it doesn't exist). Show me the proposed final content first and wait for my explicit 'yes' before writing.

Clockify time-tracking — Numaco billing policy

These rules extend the clockify-mcp plugin's universal rules (15-min quantum, single entry <= 2h, never double-book the same customer) with Numaco-specific overlap behaviour.

- Cross-customer overlap is allowed. Parallel sessions for different customers may overlap in wall-clock time — each is billed to its own project.
- Same-customer overlap is forbidden. Two entries on the same customer (whether same project or two projects under the same client) must not overlap.
- Internal Numaco syncs to skip when reconciling the calendar against Clockify: all-hands, Operations sync, Sales sync, AI labeling internal, 1:1s with Marco / Damiano.
- Project mapping cheat-sheet (attendee domain or subject keyword → Clockify project):
 - @sandoz.com, @labvantage.com, keywords oneLIMS / Planica / Mexico / DEHO / MALZ → OneLims-PolandLabels.
 - @novartis.com, keywords Artwork / GiSC / Codesoft / AW topics, organiser Kishore → Artwork Novartis (AW workflow) or GiSC support TOQIT (Codesoft / GiSC integration).
 - @syngenta.com, keywords MALZ / Bartender → MALZ support; Uncountable → Uncountable; GPD → GPD.

Step 5 — Try it

Pick any of these prompts depending on what you want to do:

Paste this prompt into Claude

Log this session to Clockify.

Paste this prompt into Claude

Scan my calendar — what haven't I logged this week?

Paste this prompt into Claude

Set up a daily Clockify reconciliation sweep.

Paste this prompt into Claude

Sync my Clockify projects with the cheat-sheet in my CLAUDE.md.

What the plugin does for you

- Nudges you every ~20 minutes in long coding sessions: "want me to log this?".
- /log-session — proposes duration, project, and a 1-sentence description; you confirm before posting.

Numaco AG
Haldenstrasse 3c
CH-8905 Islisberg
Swiss Vat No:
CHE-107.980.861 MWST
Tel.: +41 (0) 76 805 67 79
www.numaco.ch

- /clockify-gaps — reconciles your Outlook calendar against Clockify and proposes missing entries (default range: last 7 days).
- /clockify-schedule-daily — creates a daily reconciliation cron that drafts (does not send) an email with the day's missing entries.
- /clockify-sync-mappings — walks you through adding cheat-sheet rules for any new Clockify project (always asks before writing to your CLAUDE.md).
- Universal rules baked in: 15-minute quantised entries (15m, 30m, 45m, 1h, ...), single entry $\leq$ 2h, never double-books the same customer.
